Smart food locker

Advantages of smart food locker

Features for smart food locker

Smart food locker adopts the form of smart heating, and the fast food is put into the smart food locker in advance. The Yapuda control system recognizes that there is food to be deposited, and then the box is heated and kept warm. After the food is taken, the box is automatically powered off; intelligent save and get, to achieve contactless delivery, without worrying about food getting cold. Each box has an independent food-grade stainless steel heating plate, UV disinfection lamp and temperature controller to keep the temperature set by the system between 45°C and 60°C. The energy-saving and safe design preserves the taste of food to the greatest extent.

Cabinet structure size

The overall structure size and color of the cabinet can be customized according to requirements

Features of Smart Material Cabinet:

The intelligent material cabinet + management system is based on the Internet of Things architecture, starting from optimizing the storage environment, improving the efficiency of material management and reducing material management costs, through software and hardware integration, it realizes item borrowing, storage, return, monitoring, statistics and management. The material cabinet is widely used in the electronic component material sorting cabinet of the thousand workshops, and the file storage cabinets of banks and enterprises can store the intelligent material cabinets; there is no need to queue up for the material picking. The entire process from borrowing to returning is in the monitoring record of the system After the completion of simultaneous push to the background, a management report is formed, with clear responsibilities, which greatly reduces manual management costs

Support one main locker + multiple deputy lockers

RFID tag identification technology

Binding RFID tags by identifying items, real-time statistics and management of items

A variety of cabinet sizes to meet the needs of different sizes

Store different cabinets according to the size of the items, and the items are stored in categories for easy management

Cabinet end operation interface

Choose to borrow or return items, enter the quantity of items, and log in for identification

1. Choose to borrow or return items

2. Enter the quantity of items

3. Log in for identification (Multiple login methods)
